

## Scenario 1

We look forward to talking with your team. The CIO is pushing us hard to get this out quickly and I think we can get this done in a few days! The application is for the Finance Department. They have thousands of methodology and compliance documents that they need to chat with. Accuracy is critical. I think we would start with GPT-4o but want to move to GPT-4.1 quickly after go-live. Or do you think we should train our own model? Thanks!
